AN ON-PREMISES AI CREW
FOR THE 3 AM TRADING WINDOW

Made with GAMMA

THE MORNING WINDOW

A terminal's morning is won or lost at the dock counter

$15M

Changes hands in the morning trading window between 2 AM and 6 AM.

3 AM

Buyers inspect physical pallets in person, then walk straight to a counter kiosk to claim that exact lot.

$100–$150/hr

Detention fees accrued by parked truckers while paperwork and bay assignments stall.

Made with GAMMA

OPERATIONAL REALITY

Local is a business requirement, not a gimmick

- Cold rooms block cell and cloud signals; wired local Ethernet is the reliable link
- FDA FSMA 204 custody records must be logged the moment food changes hands
- Dock doors, levelers and forklifts need fast, predictable agent loops
- Shippers won't expose spot margins to public cloud AI

Made with GAMMA

SYSTEM ARCHITECTURE

15 agents, one pipeline, one GB10

All 15 agents run locally on the Dell Pro Max with GB10 · OpenShell policy gate · SHA-256 hash-chained immutable audit log

1 · Perception

Kiosk voice input, bill-of-lading optical capture, bay reefer telemetry, and pallet RFID readers.

2 · Operations

Inventory allocation, dynamic bay assignment, spot-pricing checks, and trucker dispatch queueing.

3 · Governance

FDA FSMA 204 critical tracking events, USDA Grade inspection rules, and cold-chain claims arbitration.

4 · Control

OpenShell runtime policy barriers, automated dock door interlocks, and gate pass dispatch execution.

Made with GAMMA

LIVE INTERACTION

now live: walk in, order, dispute, attack

Kiosk Walk-In

A buyer steps up to the dock screen, locks the inspected lot, auto-allocates Bay 4, and generates an encrypted gate pass in under three seconds.

Cold-Chain Dispute

A temperature spike triggers instant telemetric arbitration, compares pulp readings against bill of lading terms, and prints a verified credit memo.

Chaos & Injection

Live simulation of compressor blowouts, inbound morning rushes, and adversarial prompt injections blocked by local OpenShell boundary rules.

Live interactive test harness running concurrently on local hardware.

Made with GAMMA

EVALUATION MATRIX

Scored against what the judges asked for

01 EXECUTION

Technical Execution

15 purpose-built agents running on an asynchronous Directed Acyclic Graph with an automated chaos testing suite.

02 VALUE

Business Value

Engineered directly for a high-volume $15M trading window where cloud outages mean catastrophic perishable spoilage.

03 LOCAL FIRST

Local-First Design

100% on-premises inference executed on the Dell Pro Max GB10, operating behind metal refrigeration shielding with zero internet.

04 DEMO

Demo Quality

Fully deployed, tactile walk-in interface, resilient under active fault injection and adversarial testing during the demo.

Round 2 judging benchmark: 3 minutes live execution · 2 minutes architectural Q&A.
